Objective

Confident Computer Science fresher with strong academic knowledge across core computer science concepts and programming fundamentals. Possesses good problem-solving skills, adaptability, and a strong willingness to learn and apply knowledge in a professional environment.

Skills and interests

Programming Languages	Python, Java, OOPS and DSA
AIML	Artificial Intelligence & Machine Learning (Basic)
Cyber Security	Ethical Hacking Vulnerability Scanning, Penetration Tools
Python Libraries	NumPy, Pandas
Database	SQL, Power BI
Frontend Technologies	HTML, CSS, **JavaScript,**
Version Control System	Git, GitHub, VS Code
Soft Skills	Critical thinking, Teamwork, Communication

Education

Andhra Loyola Institute of Engineering and Technology Sep 2022 - May 2026
Bachelors of Technology in Computer Science and Engineering

Experience

Cyber Security intern | Supraja Technologies May 2025 - Aug 2025

- Conducted vulnerability assessments on **5+ systems and web applications**, identifying **10+ security vulnerabilities** using ethical hacking techniques and recommending mitigation measures.
- Analyzed **network traffic across multiple test environments** using Wireshark and evaluated **8+ web application vulnerabilities** using Burp Suite to support secure configurations.
- Prepared structured remediation documentation to support secure configurations and mitigation strategies.

Full Stack Development - Intern | IIDT Blackbuck Engineers May 2024 - Jul 2024

- Executed server-side development tasks using **Node.js and Django** across **3+ application modules**, improving data flow efficiency and application reliability during testing.
- Enhanced integration between front-end and interfaces and back end and services for seamless functionality.
- Assisted in debugging, testing, and refining application features to ensure performance and stability.

Certifications

- AI Literacy - IBM
- Prompt Engineering and generative AI
- Introduction to Deep Learning – Infosys Springboard
- Master Data Management for Beginners - TCS iON
- The Joy of computing using python - NPTL

Projects

Image Steganography Tool

- Developed a python desktop application to securely hide and extract secret messages from images using LSB steganography.
- Implemented Fernet encryption to ensure data confidentially and secure message communication.
- Designed a Tkinter-based graphical user interface for user-friendly and secure application interaction.

Smart Farming Management System

- Designed and developed a web-based platform enabling farmers to list crops, manage pricing, and connect directly with buyers.
- Implemented cart and messaging functionalities to support smooth buyer-farmer interaction.
- Utilized HTML, CSS, and JavaScript with local storage for efficient client-side data management.

Hobbies and interest

- Drawing
- Listening to Music
